PROFESSIONAL PROFILE

Junior AI developer focused on tool-using LLM applications, stateful workflows, and retrieval-augmented generation. Comfortable turning a product requirement into a working Python service with structured outputs, API tools, persistence, basic evaluation, and deployment. Strongest in agent orchestration; still developing depth in cloud operations and large-scale production systems.

KEY STRENGTHS

- Built 4 end-to-end LLM applications using LangGraph, FastAPI, PostgreSQL and vector search.
- Designed tool-calling workflows with validation, retries, timeouts and human approval steps.
- Practical understanding of prompt injection, tool permissions, hallucination controls and trace-based debugging.

PROFESSIONAL EXPERIENCE

AI Developer Intern | OrionMesh Labs - Amman, Jordan **Sep 2025 - Jun 2026**

- Implemented a customer-support agent in Python and LangGraph that routed requests across FAQ retrieval, order-status tools and ticket creation; reduced manual triage in the internal pilot by 38%.
- Added Pydantic-based structured outputs, tool argument validation, retry logic and fallback responses for API failures.
- Built a pgvector knowledge base from 1,800+ support articles with metadata filters and source citations.
- Created an evaluation set of 120 representative user questions and tracked answer correctness, tool-selection accuracy, latency and token cost.
- Exposed agent workflows through FastAPI and packaged the service with Docker for staging deployment.

Software Engineering Trainee | NexaBridge Solutions - Amman, Jordan **Jun 2025 - Aug 2025**

- Built REST endpoints in FastAPI and PostgreSQL for an internal workflow application.
- Wrote unit tests with pytest, added request logging, and contributed through Git pull requests and code reviews.
- Integrated two third-party REST APIs and handled authentication, rate-limit responses and malformed payloads.

SELECTED PROJECTS

Research Assistant Agent - *Python, LangGraph, OpenAI API, Tavily-style mock search, PostgreSQL*

Built a multi-step research workflow with planner, web-search tool abstraction, note storage, citation assembly and a final structured report. Added a maximum-step guard and approval gate before external actions.

Policy Q&A RAG Assistant - *FastAPI, pgvector, sentence-transformers, Docker*

Created document ingestion, recursive chunking, embeddings, hybrid metadata filtering and cited responses. Tested chunk-size and top-k variants against a 60-question evaluation set.

Expense Operations Agent - *Python, Pydantic, SQLite*

Developed a local agent that classifies expense requests, checks policy rules, requests missing fields and generates an auditable decision object instead of free-form text.

TECHNICAL SKILLS

Agentic AI	LangGraph, tool/function calling, state machines, routing, human-in-the-loop, structured outputs, agent traces
LLM / RAG	OpenAI API, Anthropic API basics, embeddings, chunking, retrieval, reranking basics, prompt design, evaluation datasets
Backend	Python, FastAPI, Pydantic, REST APIs, PostgreSQL, SQL, Redis basics
Engineering	Git, GitHub, pytest, Docker, Linux, logging, environment/secrets management
Cloud	AWS EC2/S3 basics, Docker Compose; limited production Kubernetes experience
Languages	Arabic - Native | English - Professional working proficiency

EDUCATION

B.Sc. Computer Science | Al-Balqa Applied University **2022 - 2026**

GPA: 3.31/4.00 | Graduation project: Tool-Using LLM Assistant for University Services

CERTIFICATIONS & LEARNING

- DeepLearning.AI - Building Systems with the ChatGPT API (2025)
- AWS Cloud Practitioner Essentials - course completion (2025)
