Rami Saadeh

Junior AI / Machine Learning Trainee

Amman, Jordan | +962 7 9000 1642 | rami.saadeh.cv@example.com | linkedin.com/in/rami-saadeh-ai | github.com/rami-saadeh-demo

PROFESSIONAL SUMMARY

Entry-level AI graduate with academic exposure to machine learning, data preprocessing, and Python notebooks. Comfortable training and comparing standard ML models and experimenting with public datasets. Interested in generative AI and autonomous agents, but has not yet built production LLM applications, tool-using agents, RAG pipelines, or backend services.

TECHNICAL SKILLS

Programming	Python (academic), SQL basics, Jupyter Notebook, Git basics
Machine Learning	scikit-learn, pandas, NumPy, classification, regression, feature preprocessing
AI Exposure	Hugging Face pipelines, basic prompt experimentation, introductory transformer concepts
Data / Visualization	Matplotlib, Excel, CSV cleaning, exploratory data analysis
Limited Exposure	REST APIs, Docker, FastAPI, vector databases, cloud deployment

EXPERIENCE

Machine Learning Intern - DataSpring Analytics (Fictional)

Amman, Jordan | Feb 2026 - May 2026

- Cleaned and prepared tabular datasets for churn and sales-prediction experiments using pandas and scikit-learn.
- Compared logistic regression, random forest, and gradient-boosting models and summarized accuracy and F1-score results for the team.
- Created Jupyter notebooks and simple charts for exploratory analysis and model review.
- Worked mainly in offline notebooks; did not own API integration, deployment, CI/CD, or production monitoring.

AI Lab Assistant - University Project Lab

Amman, Jordan | Sep 2025 - Jan 2026

- Helped classmates prepare datasets and troubleshoot Python notebook exercises for introductory ML courses.
- Used pre-trained Hugging Face sentiment-analysis and text-classification pipelines for demonstrations.
- Researched generative-AI terminology and presented a short overview of LLMs, embeddings, and prompt engineering.

SELECTED PROJECTS

Student Performance Predictor

- Built a notebook that predicts pass/fail outcomes from a public education dataset using standard supervised-learning models.
- Performed preprocessing, train/test splitting, cross-validation, and basic feature-importance analysis.

Movie Review Sentiment Demo

- Used a pre-trained transformer pipeline to classify sample movie reviews as positive or negative.
- Application remained notebook-based with no API, authentication, persistence, testing strategy, or deployment.

EDUCATION

B.Sc. Artificial Intelligence - Applied Technology University (Fictional)

Amman, Jordan | 2022 - 2026 | GPA: 3.12/4.00

COURSES & CERTIFICATES

- Machine Learning with Python - online certificate, 2025
- Introduction to Generative AI - short online course, 2026

LANGUAGES

Arabic: Native | English: Professional working proficiency
