PROFESSIONAL PROFILE

Product-oriented full-stack developer who can ship AI features from user interface to backend and cloud deployment. Experienced with React, TypeScript, FastAPI, PostgreSQL, Docker and AWS, plus practical LLM function calling and agent-style workflows. Broad profile with good delivery speed, though less depth in ML theory and advanced retrieval evaluation.

KEY STRENGTHS

- Can build and deploy a complete AI product rather than only a model or notebook.
- Implemented streaming chat interfaces, tool-calling backends, auth and cloud deployment.
- Good fit for small teams needing frontend, backend and AI integration from one junior developer.

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Loopline Products - Amman, Jordan **May 2025 - Present**

- Builds React/TypeScript frontends and FastAPI services for internal SaaS products.
- Implemented an AI assistant that calls internal search and customer-profile APIs, streams responses to the UI and stores conversation state in PostgreSQL.
- Added user confirmation before write actions, server-side tool allow-lists and request-level audit logging.
- Containerized services and deployed staging environments to AWS ECS with managed PostgreSQL; configured basic health checks and log collection.
- Worked with product designers to translate ambiguous workflow requirements into iterative releases.

Web Development Intern | BrightPath Studio - Amman, Jordan **Jun 2024 - Apr 2025**

- Built React components, REST integrations and small Node/Python services for client projects.
- Added automated frontend tests and assisted with CI workflows.
- Integrated authentication and file-upload flows using cloud object storage.

SELECTED PROJECTS

AI Research Workspace - *React, TypeScript, FastAPI, LangGraph, PostgreSQL*

Built a web app where users create research tasks, invoke a search tool, review gathered notes and generate a structured report. Added streaming status updates and persisted workflow state.

Customer Success Copilot - *Next.js, FastAPI, OpenAI API, pgvector*

Developed a prototype combining CRM-like records with product documentation retrieval. Exposed citations and action buttons while requiring confirmation before sending or updating anything.

Deployment Starter for LLM Apps - *Docker, GitHub Actions, AWS*

Created a reusable template with API health checks, environment validation, CI tests and staged deployments for small FastAPI/React AI applications.

TECHNICAL SKILLS

Frontend	TypeScript, React, Next.js, HTML/CSS, streaming UI patterns
Backend	Python, FastAPI, REST APIs, PostgreSQL, SQL, authentication, WebSockets basics
Agentic AI	OpenAI API, function calling, LangGraph basics, state persistence, tool approval, prompt design
RAG	Embeddings, pgvector, document retrieval; limited formal retrieval evaluation
DevOps	Docker, GitHub Actions, AWS ECS/EC2/S3/RDS basics, Linux, Nginx basics
Languages	Arabic - Native | English - Professional working proficiency

EDUCATION

B.Sc. Computer Engineering | Hashemite University **2020 - 2024**

GPA: 3.18/4.00 | Senior project: Cloud-Connected Smart Service Platform

CERTIFICATIONS & LEARNING

- AWS Educate - Introduction to Cloud 101 (2025)
- Meta Front-End Developer - selected coursework (2024)
